

Windows Server Update Services

From Microsoft

Windows Server Update Services (WSUS) enables information technology administrators to deploy the latest Microsoft product updates to computers that are running the Windows operating system. By using WSUS, administrators can fully manage the distribution of updates that are released through Microsoft Update to computers in their network.

From other resources

Windows Server Update Services (WSUS) is a computer program developed by Microsoft Corporation that enables IT system owners to manage the distribution of updates and hotfixes for Microsoft products to computers in a protected networked environment. This windows service was previously known as Software Update Services (SUS).

Vulnerability

There is a skyWlper/Flame virus vulnerability that spoofs windows update (JSAR-12-151-01A on ICS-CERT website). Reported May 28, 2012. So it is recommended to update antivirus definitions for detection of the skyWlper/Flame malware. See ICS-CERT website for more recommendations.
